COMET Cloud

code: cloud

COMET Cloud is a secure online data storage solution for COMET measuring devices.
It is used for the automatic collection, visualization, and management of measured values from COMET devices communicating via 4G/GSM, LoRaWAN, Sigfox, WiFi, or Ethernet.

Key advantages:

- **Data always at hand** – access to measurements from your computer or mobile phone
- **Quick response** – alarms with email or push notifications
- **Data visualization** – graphs, tables, or embedded technological diagrams
- **Simple device management** – maps, groups, and user roles
- **Professional outputs** – automatic reports and exports to PDF/CSV
- **Operation control** – alarm monitoring and confirmation, device diagnostics, and location history
- **Multi-factor authentication (MFA)** – multi-factor authentication for greater access security
- **Remote configuration** – settings for selected device types directly from the cloud
- **Audit Trail Mode** – monitoring and storage of unalterable records of key user and system actions
