COMET Cloud Lite for Android & iOS

code: cloud_app

COMET Cloud Lite is a mobile application that extends the capabilities of the COMET Cloud service to devices running Android and iOS operating systems.
It allows you to monitor the current values and alarm statuses of connected COMET devices from anywhere – quickly, clearly, and in real time.
The application has a simple and intuitive interface that allows you to easily view measured data in a graph, check measurement history, or receive notifications of new alarms.
Thanks to push notifications, you have a constant overview of the status of your devices, whether you are at work, at home, or on the road.
With the COMET Cloud Lite application, you have your devices and measurements under constant control.
COMET Cloud Lite is a clear, reliable, and effective application that brings COMET Cloud to your phone.

Key Features of COMET Cloud Lite:

- **Display of current data** - clear visualization of values in real time, including display in a graph
- **Alarm management** - receiving and viewing alarm messages sent from COMET Cloud
- **Push notifications** - immediate notification when an alarm condition occurs
- **Measurement history** - browsing the measurement history of the data archive by time
- **Localization** - display of the measured location on the basis of an inserted image or diagram
- **Reports** - generating and sending PDF reports directly from the application
