

COMET Cloud Lite for Android & iOS

code: cloud_app

COMET Cloud Lite extends the use of [COMET Cloud](#) to mobile devices. It is intended for users of mobile devices with Android and iOS operating systems.

Simple and intuitive interface allows monitoring of measured values and alarm conditions from COMET devices. It allows viewing and actively reports the receipt of alarm messages sent from COMET Cloud. This gives you a constant overview of the monitored situation, no matter where you are.

COMET Cloud Lite offers:

- Receive and view alarm messages
- Notification of the arrival of an alarm message
- Display of measured data in a graph
- View and browse historical measured data
- Displaying the measured location with an image

With COMET Cloud Lite, you get a reliable and efficient application that keeps you in touch with your devices.
