# Output relays module

code: MP050

Relays module is used for mounting inside the MS. Output relays module with interconnection cable. It contains 16 mains relays maximum voltage 50V AC/75V DC with switching-over contacts. Each relay can be controlled based on alarm creation at different input channels accordingly to setting of user program. The output relays are designed for control of external devices (switching of heating, cooling, ventilation, remote alarm, etc.).
