

IoT Wireless Temperature Sensor for 4 external Pt1000 probes with CINCH connector, powered by Sigfox

code: W0841E

The device measures the temperature from four external Pt1000 probe on the cable - you can [choose it from an optional accessory](#).

The measured values are sent in an adjustable time interval (10 min to 24 h) by radio transmission in the [Sigfox network](#) to the [COMET Cloud](#), from which the user can view them using a personal computer or mobile device.

The instrument can monitor up to 2 alarm limits of the each measured temperature channel. Exceeding these limits is indicated by sending an emergency message. [COMET Cloud](#) transmits this alarm message via e-mail to the selected user. The device is suitable for applications that tolerate the delay of information delivered by Sigfox (max. 10 min).

Highlights:

- wireless transmission of measured values and alarm states
- temperature measurement in up to four places for the price of one fee
- battery power (C size) with low battery indication (battery life 1 - 10 years)
- input for external power
- remote setting of the device from [COMET Cloud](#) (maximum once a day)
- IP20
- Traceable calibration certificate in accordance with EN ISO / IEC 17025

The availability of Sigfox network in a particular location

[Check your Sigfox network availability](#) before you buy your device. COMET devices in the Sigfox network can be used anywhere in the RC1 zone. Learn more about [Sigfox \(RC\) Radio Zones](#).

With a newly purchased wireless sensor with Sigfox connectivity, you receive 1 year of [COMET Cloud](#) for free; an additional year of operation in [COMET Cloud](#) then requires [2 credits](#).
